

JEMNÁ MECHANIKA A OPTIKA

VĚDECKO-TECHNICKÝ ČASOPIS
ROČNÍK 52 9/2007

OBSAH

Separace polárních a longitudinálních komponent magnetizace při magneto-optických měřeních. Lineární a kvadratické Kerrovy jevy (O. Životský, K. Postava, A. Stupakiewicz, Z. Kurant, A. Maziewski)	243
Možnosti hodnocení tloušťky lepené vrstvy (M. Müller, R. Chotěborský)	247
Vnútorně chlazené Si monochromátory pre synchrotrónne žiarenie (P. Oberta, J. Hrdý, B. Lukáš)	250
Matematicko - statistický model rezných síl v závislosti od rezných podmienok (M. Gombár, A. Pella)	253
Prezentace strojírenství v Praze opět v dubnu 2008	256
Aký jasomer je vhodný pre úradné meranie? (P. Horňák, M. Košťál)	257
Vliv clonového čísla na optické zobrazení (A. Mikš)	262
Nové podněty pro inteligentní automatizaci	265
Z dílny starých mistrů	267
Svět „aluminiového outsourcingu“ (V. Bařina)	268
Univerzitní profesor RNDr. Miroslav Jaroslav Hrabovský, DrSc. jubilující (V. Malíšek)	270
Akademie věd v Olomouci (red.)	272

Obsah časopisu Jemná mechanika a optika je uveden na internetu: <http://jmo.fzu.cz>

Informace o předplatném podá, objednávky přijímá, objednávky do zahraničí vyřizuje: SLO UP a FZÚ AV ČR, Tř. 17. listopadu 50, 772 07 Olomouc, tel.: 585 223 936, fax: 585 631 531.

Cena čísla 40 Kč včetně DPH

FINE MECHANICS AND OPTICS

SCIENTIFIC-TECHNICAL JOURNAL
VOLUME 52 9/2007

CONTENTS

Separation of polar and longitudinal magnetization components in magneto-optic measurements. Linear and quadratic Kerr effects (O. Životský, K. Postava, A. Stupakiewicz, Z. Kurant, A. Maziewski)	243
Thickness evaluation of bonded layers (M. Müller, R. Chotěborský)	247
Internally cooled Si monochromators for synchrotron radiation (P. Oberta, J. Hrdý, B. Lukáš)	250
Mathematical - statistical model of cutting forces on dependence of cutting conditions (M. Gombár, A. Pella)	253
Engineering presentation again in Prague on April 2008	256
What a luminance meter is advisable for official measurements? (P. Horňák, M. Košťál)	257
Influence of the F-number in optical imaging (A. Mikš)	262
Smart automation – new challenge	265
The world of “aluminium outsourcing” (V. Bařina)	268
Professor RNDr. Miroslav Jaroslav Hrabovský, DrSc. celebrating his 60th (V. Malíšek)	270
Academy of Sciences in Olomouc (red.)	272

You can also find the contents of the Journal on internet: <http://jmo.fzu.cz>

Information on subscription rate and on ordering gives the SLO UP a FZÚ AV ČR, Tř. 17. listopadu 50, 772 07 Olomouc, tel.: 585 223 936, fax: 585 631 531.

CONTENTS

Separation of polar and longitudinal magnetization components in magneto-optic measurements. Linear and quadratic Kerr effects (O. Životský, K. Postava, A. Stupakiewicz, Z. Kurant, A. Maziewski).....	243
The magneto-optical methods for separation of linear and quadratic effects in reflection are summarized. The dependence of reflection coefficients and magneto-optical angles of Kerr rotation and ellipticity on magnetization components is shown in details. Measuring methods are divided in two groups according to the incidence angle of laser beam. The separation of polar, longitudinal, and transversal contributions is demonstrated on Au/Co/Au system using the method of sample and magnetic field rotation.	
Thickness evaluation of bonded layers (M. Müller, R. Chotěborský)	247
Internally cooled Si monochromators for synchrotron radiation (P. Oberta, J. Hrdý, B. Lukáš)	250
Mathematical - statistical model of cutting forces on dependence of cutting conditions (M. Gombár, A. Pella).....	253
Article deals with creation of mathematical – statistical model of cutting forces at turning of steel ISO 683/1-87 by means of regression and correlation analysis. It has been identified the significance of that factors that influence the investigated parameter.	
Engineering presentation again in Prague on April 2008	256
What a luminance meter is advisable for official measurements? (P. Horňák, M. Košťál).....	257
Influence of the F-number in optical imaging (A. Mikš).....	262
By analysis of the dependence of longitudinal spherical aberration on the numerical aperture, it is possible to find such values of the numerical aperture, where the aberration is zero. Such values of the numerical aperture are called correction zones. The work theoretically analyses the described problem and equations are derived for expression of wave aberration coefficients using correction zones for spherical aberration of the third and fifth order. There was done an analysis of optimal values of correction zones and optimal position of the centre of reference sphere using derived equations. This analysis was done for the case when we require the fulfilment of the Strehl ratio. Finally, there was done the relation for calculation of correction zones for optical system having identical position of the optimal image plane for two values of the F-number.	
Smart automation – new challenge	265
The world of “aluminium outsourcing” (V. Bařina)	268
Professor RNDr. Miroslav Jaroslav Hrabovský, DrSc. celebrating his 60th (V. Malíšek)	270
Academy of Sciences in Olomouc (red.)	272
